

MARINE RENEWABLE ENERGY VIDEOS AND ANIMATIONS

Visual media is one of the most effective ways of helping us interpret what things are and how they relate to other things. To assist in the understanding of marine renewable energy, we have located quite a few videos and animations prepared by equipment vendors and others and listed them below for easy reference. *Note that while many of the marine energy converters presented in the videos are large devices intended for utility scale commercial power generation facilities, smaller devices are also readily available for community scale or off-grid power generation.*

[Siemens/Marine Current Turbines “Seagen”, Strangford Lough, Northern Ireland](#)
